```

Вывод: программа масштабируется хорошо, поскольку при увеличении потоков ускорение стремится к линейному значению (в некоторых точках даже превышает линейное значение).

```
Summary:
1 threads: S = 0.182029, T = 0.105292
2 threads: S = 0.293326, T = 0.065341
4 threads: S = 0.550371, T = 0.0348242
7 threads: S = 0.71735, T = 0.0267181
8 threads: S = 0.675347, T = 0.0283798
16 threads: S = 0.994644, T = 0.0192694
20 threads: S = 1.60498, T = 0.0119417
40 threads: S = 2.77547, T = 0.00690556
```

Вывод: программа масштабируется не очень хорошо, поскольку ускорение программы при увеличении числа потоков медленно стремится к линейному значению.

```
Summary:

1 threads: S = 1.00937, T = 0.489545

2 threads: S = 1.78763, T = 0.276417

4 threads: S = 3.31222, T = 0.149184

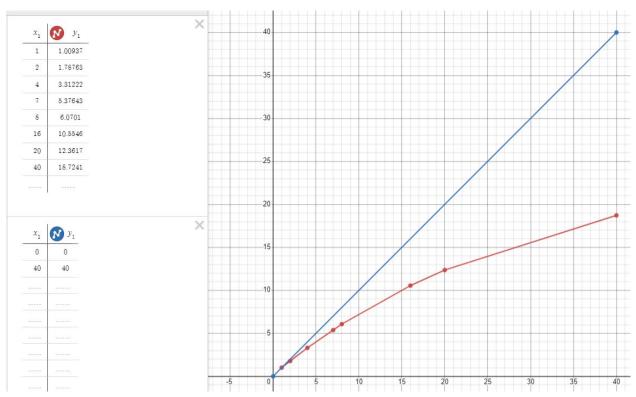

7 threads: S = 5.37643, T = 0.091907

8 threads: S = 6.0701, T = 0.0814041

16 threads: S = 10.5546, T = 0.0468166

20 threads: S = 12.3617, T = 0.0399729

40 threads: S = 18.7241, T = 0.0263902
```

Вывод: программа масштабируется гораздо лучше, чем в предыдущей имплементации, но при увеличении числа потоков ускорение начинает уменьшаться.
